

NorthArk Investment Bank - Project Forecast

Project Team

NorthArk Project Note: The project team document is one of the first to be filled out. It is where you will divide up roles and responsibilities for the first time before entering a sprint. This includes selection of a Scrum Master to keep the team organized during daily stand ups, weekly retrospectives, and sprint planning sessions. Completing this document ensures that each team member is accountable for their role and knows what their duties are.

A full scale project within an organization may have many more team members with much more specified roles. However, in this project each of you will be wearing many hats.

Role	Name	Responsibilities
Project Sponsor	John Sponsor, Director of Sales	Defines vision for overall Project (Internal Client from Front Office)
Product Owner	Sam Jones, Director of IT	Defines the needs of the internal Client. Clarifies needs to Scrum team to ensure Team is clear on requirements.

The following Scrum Team roles are to be determined and assigned by the team from “Smith Consultants”

NorthArk Project Note: In order to complete the “Skillset” section below, think about what you like to do and what you’re good at. (design for front end development, backend programming, Organization/communication(Key for the Scrum Master), testing, etc. However, keep in mind, you’ll also be working in areas where you may not have as much experience.

Role	Name	Skill set
Scrum Master/ Dev team member		Strong knowledge of Scrum. Keeps team moving following scrum principles.
Dev team member		Strengths:
Dev team member		Strengths:
